

Energy Management in the Healthcare Industry

*“It is not unreasonable for a company starting out in energy management to achieve a **20% reduction** or more in their energy bills by simple, good housekeeping measures alone.” – Sustainable Energy Authority Ireland*

*An energy audit will identify a range of energy saving opportunities **as well as improving patient and staff comfort levels at the facility.***

*Energy solutions can also offer a **shared saving scheme***

*Our **energy management services** include energy auditing and outsourced energy management.*

It is easily possible to save 10-15% of a healthcare facilities total energy costs by implementing some common sense, good housekeeping measures. Even better, energy savings made through good housekeeping yield immediate results and require no financial investment or specialist skills.

At Energy Solutions, we have experience of energy auditing and energy management in a range of commercial and industrial sectors. This has been developed into a comprehensive Energy Management Service targeted at high energy users such as healthcare facilities.

Comfort, health and safety are priority objectives in healthcare and improved energy management will lead to improved comfort levels, greater control of facilities and increased operational efficiency.

At Energy Solutions, we believe that organisations and individuals who recognise the need to change to efficient practices will benefit, both economically and ethically. Organisations do this by becoming part of the transition from a fossil fuel based, energy intensive economy to a more sustainable mode of operation.

Contact us anytime to discuss your energy use and the potential for saving energy and costs.

Following a period of relatively stable energy prices in the previous decade, and despite a recent price slump, energy costs have risen upwards overall, and are rising again. Everyday operational costs will increase further as the cost of carbon is included into energy costs through programmes such as carbon taxation.
